

# User Registration and Login System

## Objective

Build a basic authentication system where users can register, log in, and view their profile.

## Requirements

### Backend

Create APIs to:

- Register a new user
- Login user
- Get logged-in user profile

User information should include:

- Name
- Email
- Password

### Frontend

- Create a Registration page
- Create a Login page
- Create a Profile page
- After login, user should be able to see their profile details
- Provide a logout option

## Submission Guidelines

1. Complete both **Frontend and Backend** parts of the task.
2. Ensure the project runs without errors.
3. Connect frontend properly with backend APIs.
4. Maintain proper folder structure and clean code.
5. Create a **Public GitHub Repository** and upload your complete source code.
6. After uploading, send the repository link via email.

### Email Details:

- To: [hr@stackdot.in](mailto:hr@stackdot.in)
- CC: [vivek.godhani@stackdot.in](mailto:vivek.godhani@stackdot.in)
- Subject: **Full Stack Practical Task Submission – [Your Name]**
- Include:
  - Your Full Name
  - Contact Number
  - GitHub Repository Link

Make sure the repository is publicly accessible before sending the email.
